xStream detects outliers in dynamic streams having a large and evolving feature-space

#kdd2018 will feature keynotes by David Hand, Alvin Roth, @yeewhye and Jeannette Wing ... | Towards Actionable Intelligence - this #icml2018 tutorial was so good! ... | ... do you like the acceptance in #nips2018 to be decided by random noise?

#kdd2018
#icml2018
#nips2018

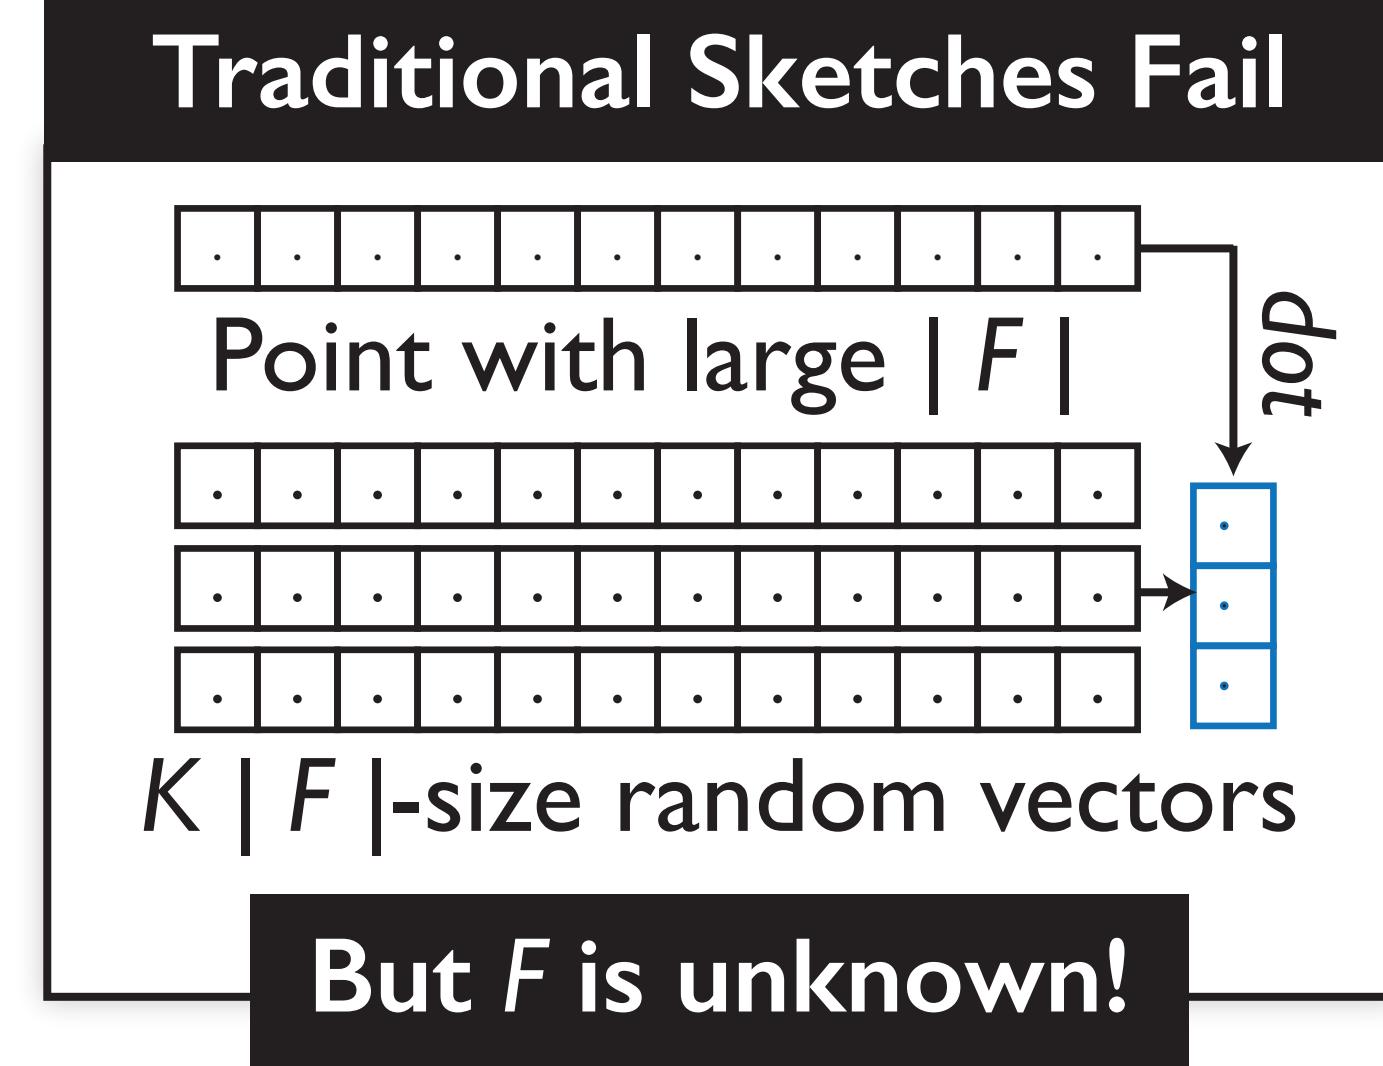

Challenges

- Large and evolving feature-space
- Point updates & concept drift
- Outliers at multiple granularities
- Limited memory

| | STORM | HSTREES | LODA | RS-HASH | RS-FOREST | XSTREAM |
|-------------------|-------|---------|------|---------|-----------|---------|
| PROPERTIES | | | | | | |
| MULTI-SCALE | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ |

STREAMHASH: Sparse Streaming Sketches

Idea: don't cache, hash!

$h_i(f): f \rightarrow \{+1, 0, -1\}$

$h_1 \dots h_K$ take constant space!

Random Subspace Selection

$$h_i[f] = \sqrt{\frac{3}{K}} \begin{cases} -1 & \text{with prob. } 1/6 \\ 0 & \text{with prob. } 2/3 \\ +1 & \text{with prob. } 1/6 \end{cases}$$

2/3 chance of feature being dropped

Constant-time Point Updates

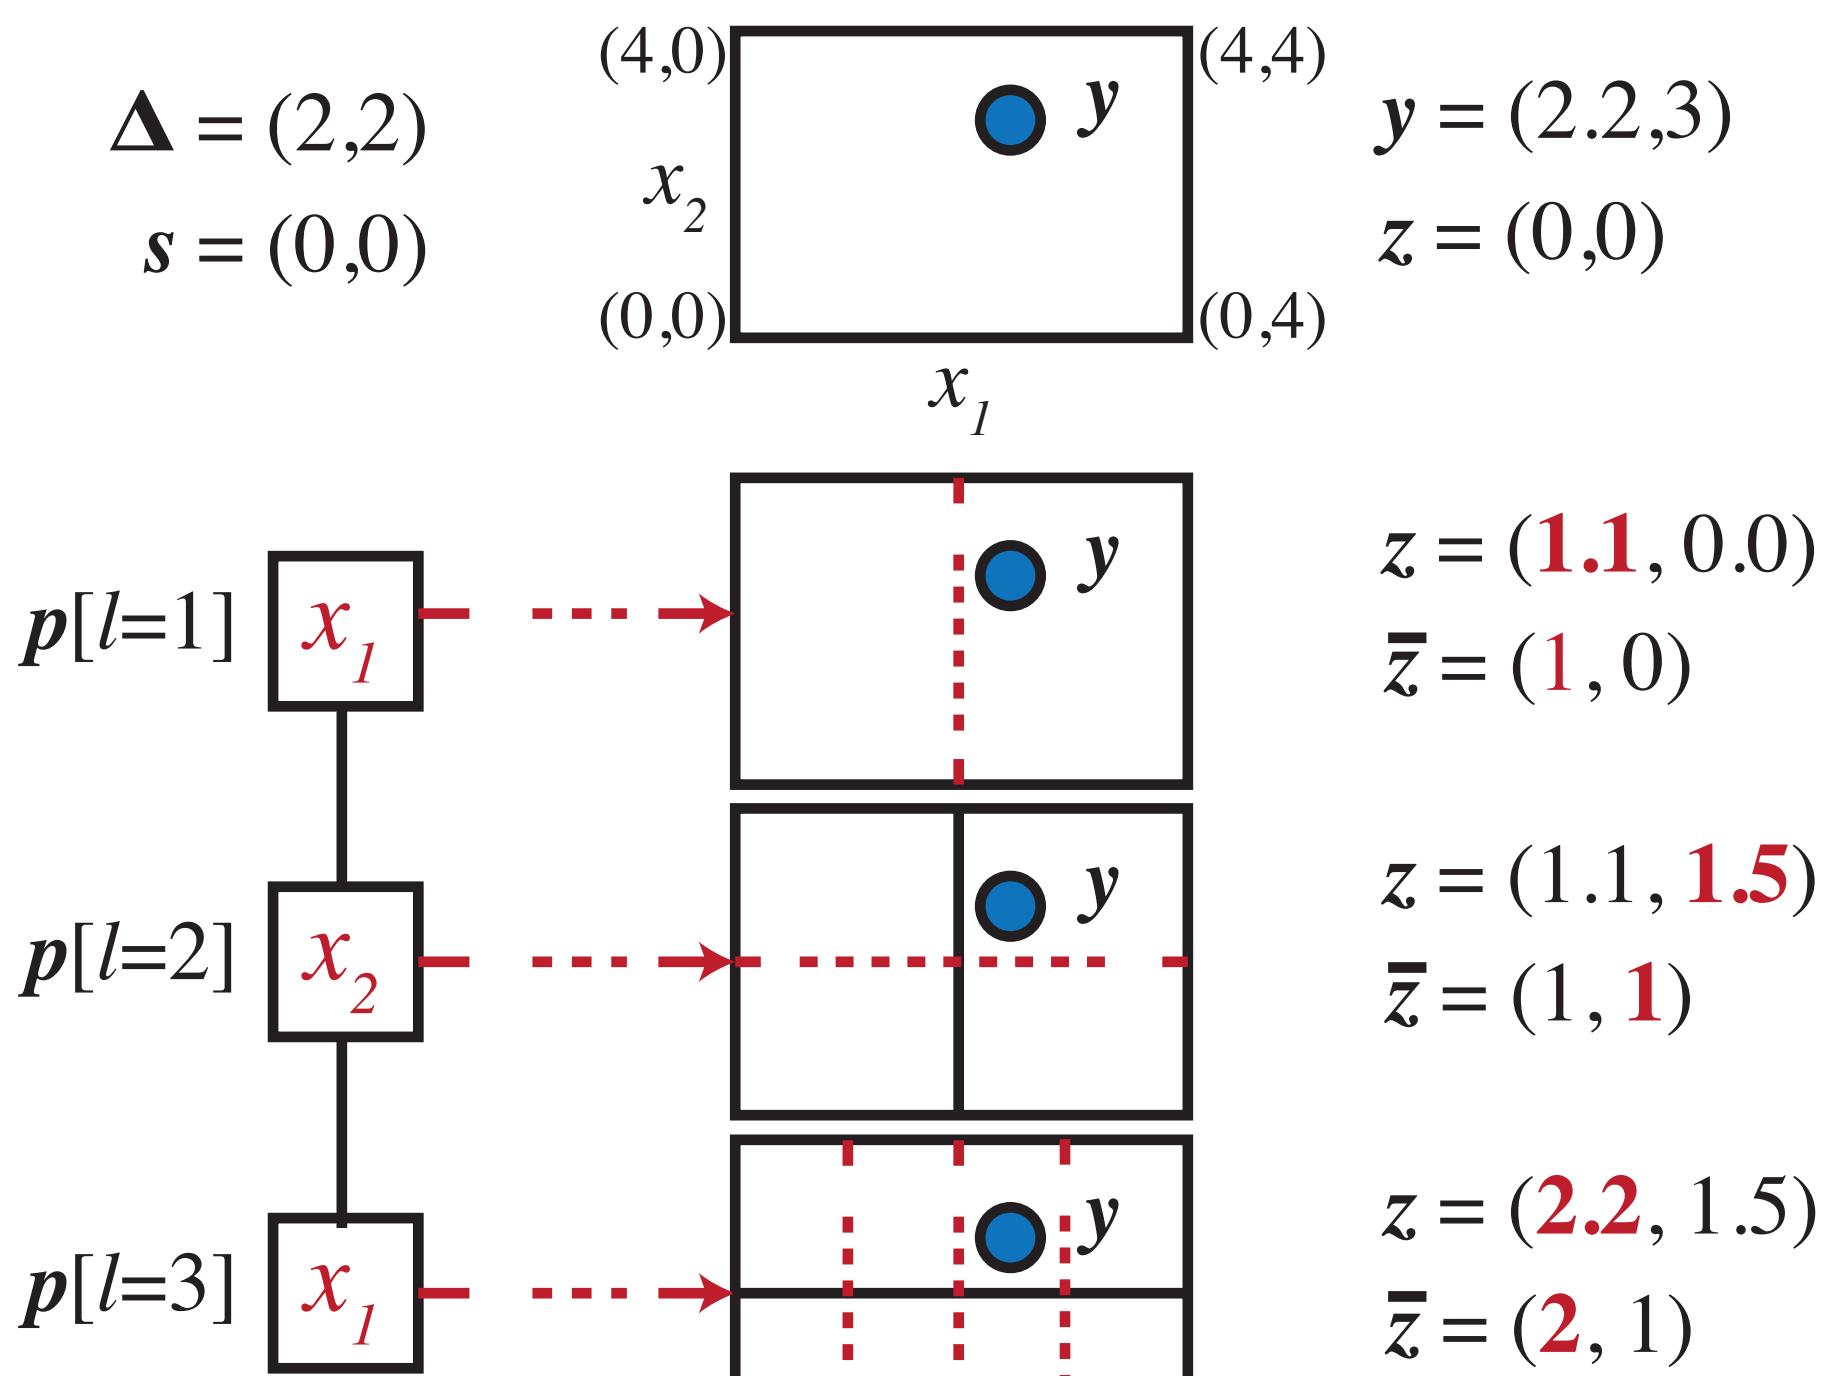

Stream update: (id, f, δ)

$$\begin{array}{ccccc} 0.2 & +/- & h_1(f) & +1 & \\ -0.4 & & h_2(f) & 0 & \\ -1.0 & & h_3(f) & -1 & \end{array} \times \delta$$

Projection of point id

Hash updates of feature f

Half-Space Chains

Score of each chain over all levels l
 $\text{score}(y) = \min_l 2^l \times \text{count}_l[\bar{z}]$

Method Highlights

Density-estimation ensemble to detect outliers at multiple scales

Projected subspace method to detect outliers in high + unknown dimensionality

Alternating windows to handle non-stationarity & concept drift

Constant time and space complexity to handle big, rapid data streams

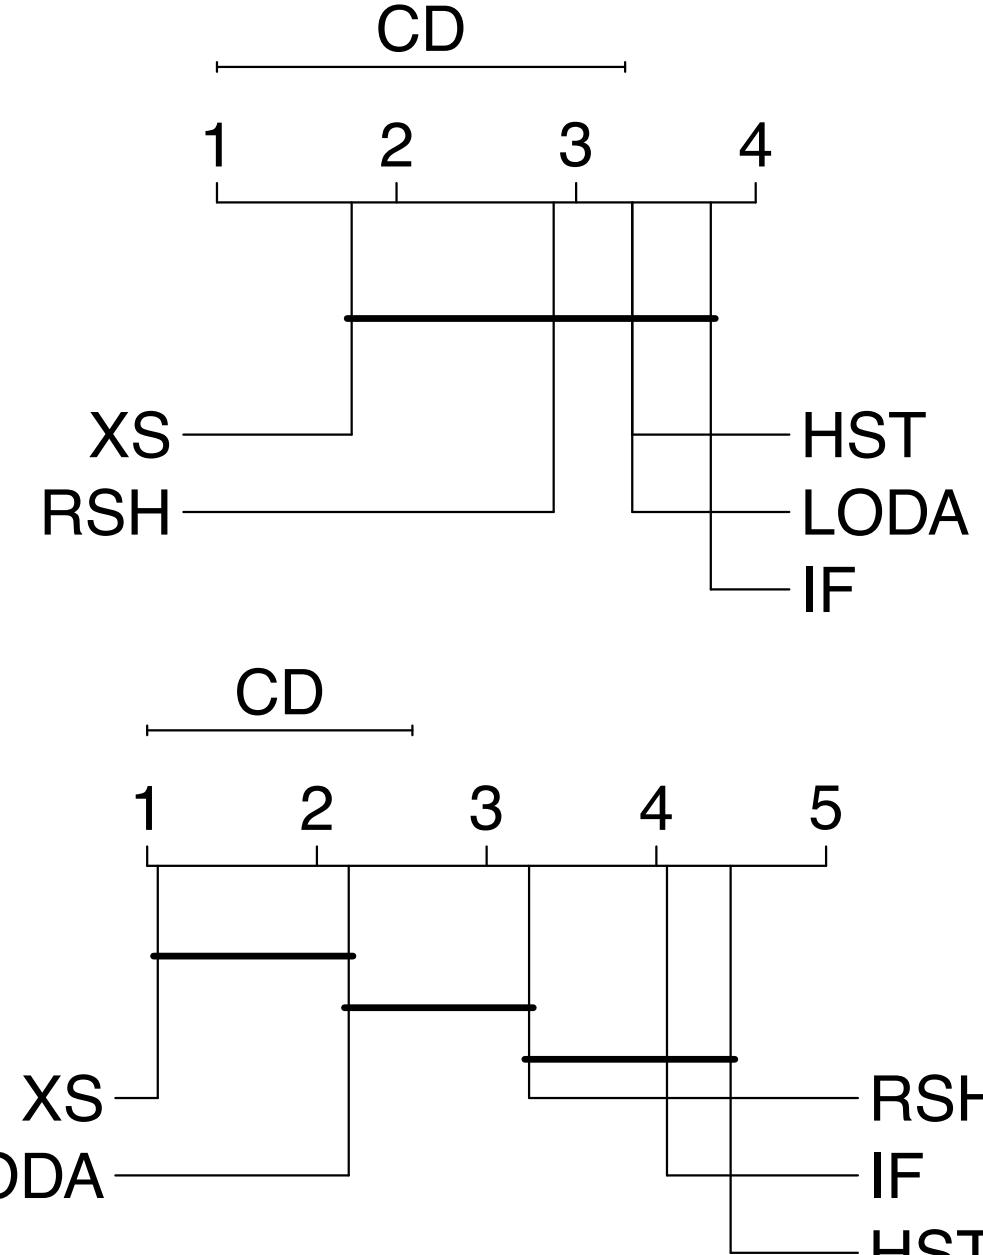

Time $O(KmDM)$

Space $O(MmLD + NK)$

Static Data

8 UCI Outlier Detection Datasets

| Avg. Rank | Original | Perturbed |
|-----------|----------|-----------|
| XSTREAM | 1.75 | 1.06 |
| IFOREST | 3.75 | 4.06 |
| HSTREES | 3.31 | 4.44 |
| RSHASH | 2.88 | 3.25 |
| LODA | 3.31 | 2.19 |

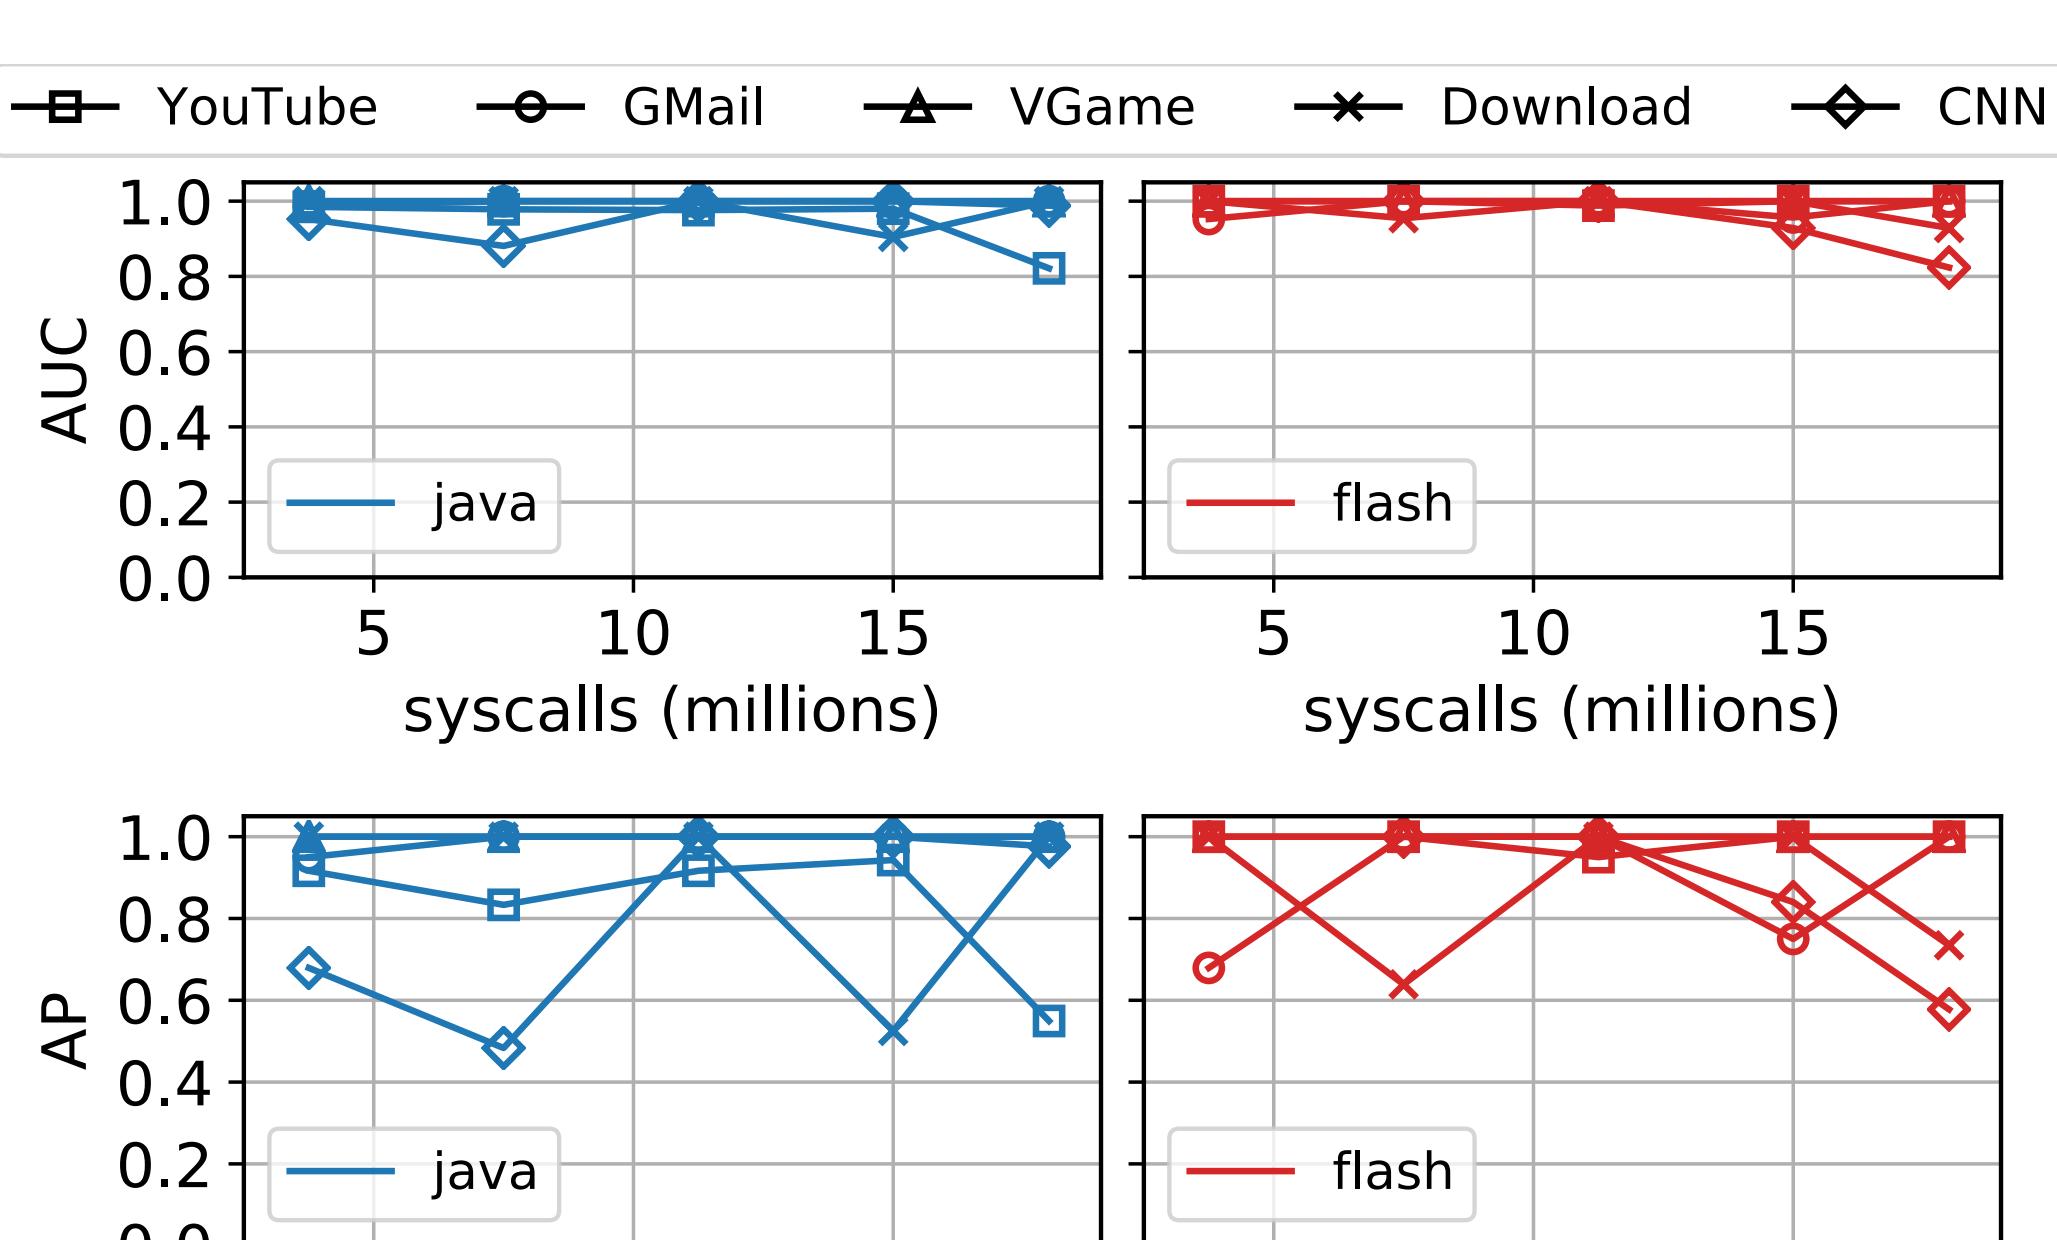

Row-stream Data

| Dataset | $ D $ | d | # outliers |
|----------|-------|------|------------|
| SPAM-SMS | 5.5K | 8.4K | 747 |
| SPAM-URL | 2.4M | 3.2M | 792K |

| | Avg. Precision | Mean | Overall |
|---------|----------------|-------|---------|
| XSTREAM | 0.409 | 0.404 | |
| HSTREES | 0.363 | 0.359 | |
| RSHASH | 0.203 | 0.201 | |
| LODA | 0.080 | 0.080 | |

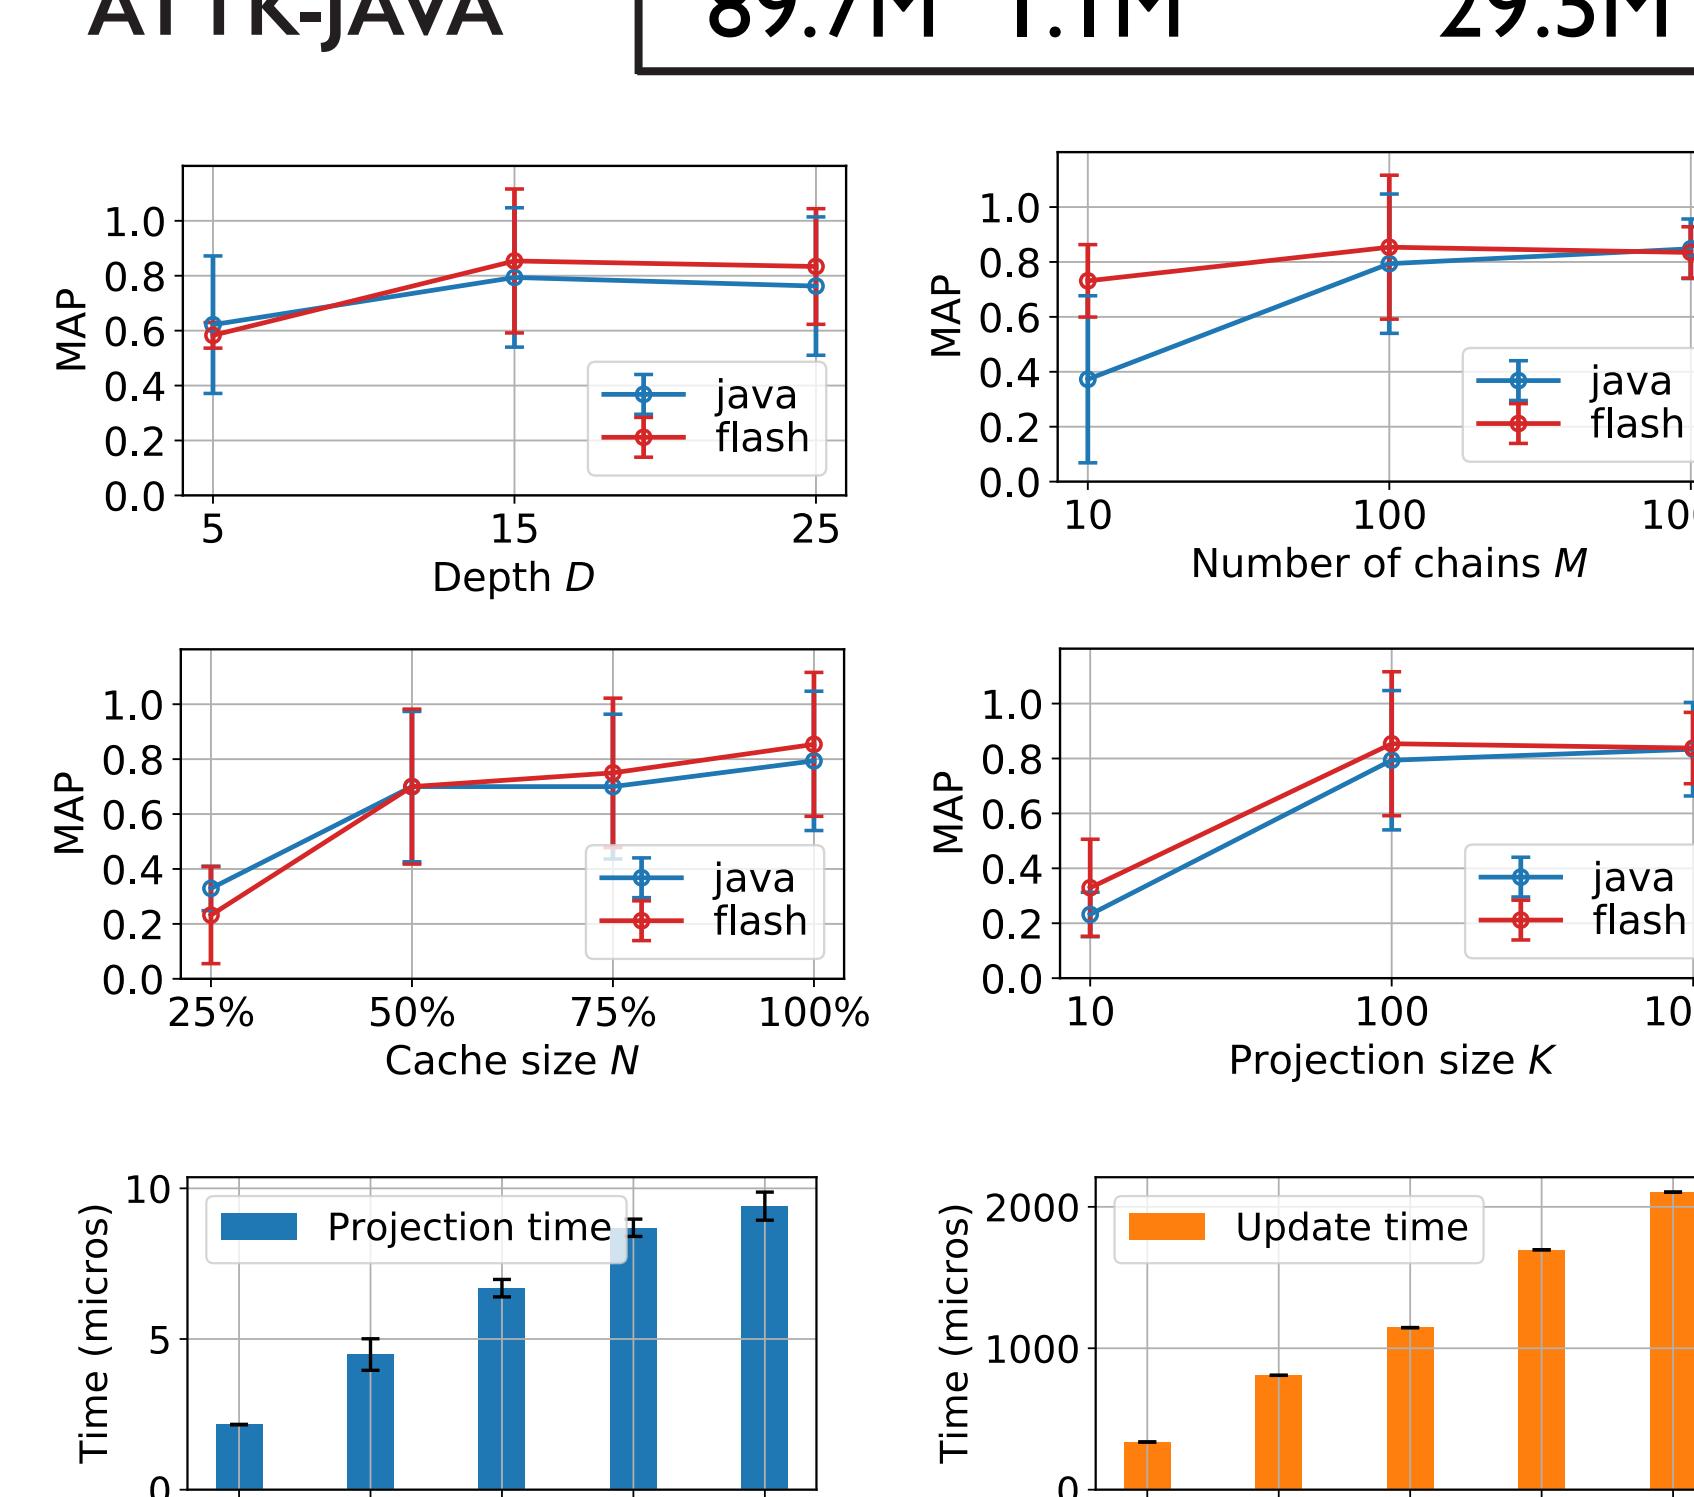

Evolving-stream Data

| | Mean Avg. Precision | Attk-Java | Attk-Flash |
|---------------|---------------------|-----------|------------|
| All Scenarios | 0.794 | 0.854 | |

Dataset n d # outliers

| | | | |
|------------|-------|------|-------|
| ATTK-FLASH | 63.1M | 1.1M | 2.8M |
| ATTK-JAVA | 89.7M | 1.1M | 29.5M |
